

June 2021

Dear RETRO Members;

June is **National Safety Month**. This means everyone in each organization needs to pay attention to risk reduction efforts through hazard identification and reporting. A successful safety program depends on spotting hazards. Efforts include evaluating the risk and removing or controlling hazards before they can do harm.

If left unnoticed, hazards that produce no injury today can lead to a serious injury in the future. Besides, safety at home is just as important. Being safe allows you to go out and do the things you enjoy doing!

Your Safety Culture - The culture of the organization sets the tone for everything in the safety arena. In a positive safety culture, everything you do about safety is important. You may have heard the slogan “everyone goes home safe everyday”. You may have another version, but the general theme is getting everyone to think safety and be safe in the work environment.

How do you get employees to wear their safety ‘hat’ all the time? It starts with management sending a clear message to employees that “we want and need your help”. Urge employees’ creativity and innovative solutions to solve hazards or processes that improve safety and increase productivity. The rule is not there just to have a rule, it is there because someone got hurt or killed as a result of that incident. When you think of safety as a ‘team sport’ you will begin to think of safety as a culture and that culture will shape the performance of the team.

RS SafetyTV has a section on ways to create [Safety Culture](#) in your workplace.

Box Knife Use- Lately I have been seeing claims where box knives have been the culprit. Many workers use utility knives to cut strapping, puncture shrink-wrap and open packaging. But one wrong move and these blades can do serious harm. In fact, **nearly 40 percent of all injuries** attributed to manual workshop tools in the United States involve **knives with retractable blades.**

To learn more go to [RS Safety Library](#) Utility Knife Safety section. Another option is to take the **SAFE ME** [box knife lesson](#) and have the employee print or email the passing certificate to you.

Thinking safety for you,

Rick Means
