

## Fire Extinguishers

It is a relatively small item, but very effective tool when used correctly and the investment in making sure they are in working condition, as well as easily accessible, will pay off in the long run if a small fire were to happen on your premises.

The most common type is **A-B-C** Fire extinguishers which can be used on types of fires like combustible materials, electrical and flammable liquids. You should check with your fire department on what the local code requirements are regarding number of extinguishers to have on hand as well as placement height.

If you are ever put in a situation to have to use a fire extinguisher, the P.A.S.S. system is an effective way to take care of a small fire. P-pulling the pin. A-aim at the base of the fire. S-squeeze the handle. S-sweep side to side. For a short video, click [here](#).

Please make sure you include this as part of your new hire orientation. We hope that you will never be in the position to have to use a fire extinguisher, but it is good to be prepared just in case!

Rick Means, Director of Safety and Education, is available to help members draw up safety plans and suggest topics for safety meetings. Contact Rick at 360-943-9198, Ext. 118 or [rmeans@waretailservices.com](mailto:rmeans@waretailservices.com).
