

# SAFER Workplace

## Stop. Assess. Formulate. Execute.

**SAFER system ensures safer work, while fostering a safety mindset to prevent injuries. Steps identify hazards in machinery, tasks, processes and conditions.**

# S

### Stop

While halting production may usually seem negative, here it prevents future interruptions due to accidents. Prioritizing safety talks empowers employees to voice concerns, averting potential accidents and fostering a safer environment.

# A

### Assess

First, identify hazards. Then, assess and act to minimize risks. Consider a Job Hazard Analysis to review task severity, prompting closer inspection of the processes for the task at hand.

# F

### Formulate

Post-review, plan. If needed, create secure solutions with the team to ensure safety and improved productivity.

# E

### Execute

After planning, execute to assess that the plan is working as intended. Periodic reviews are vital for monitoring success.

# R

### Review

Sometimes, initial solutions need redesigning; after implementing, reassess to ensure effective resolution and avoid new risks.

Our safety team is available to help members take their safety program from compliance to quality safety practices.
